

COVID-19 PANDEMIC

Vaccinations by Case Rate

What does this visualization show?

- The following set of maps show the percent of the population that is fully vaccinated against COVID-19 and the 7-day COVID-19 case rate per 100,000 population in U.S. counties.
 - Percent [fully vaccinated](#) (series completed) is based on data reported to CDC by State/Territory and select Federal Entities.
 - The [7-day case rates](#) are based on COVID-19 cases reported by state and territorial jurisdictions to CDC in the past 7 days.

Notes:

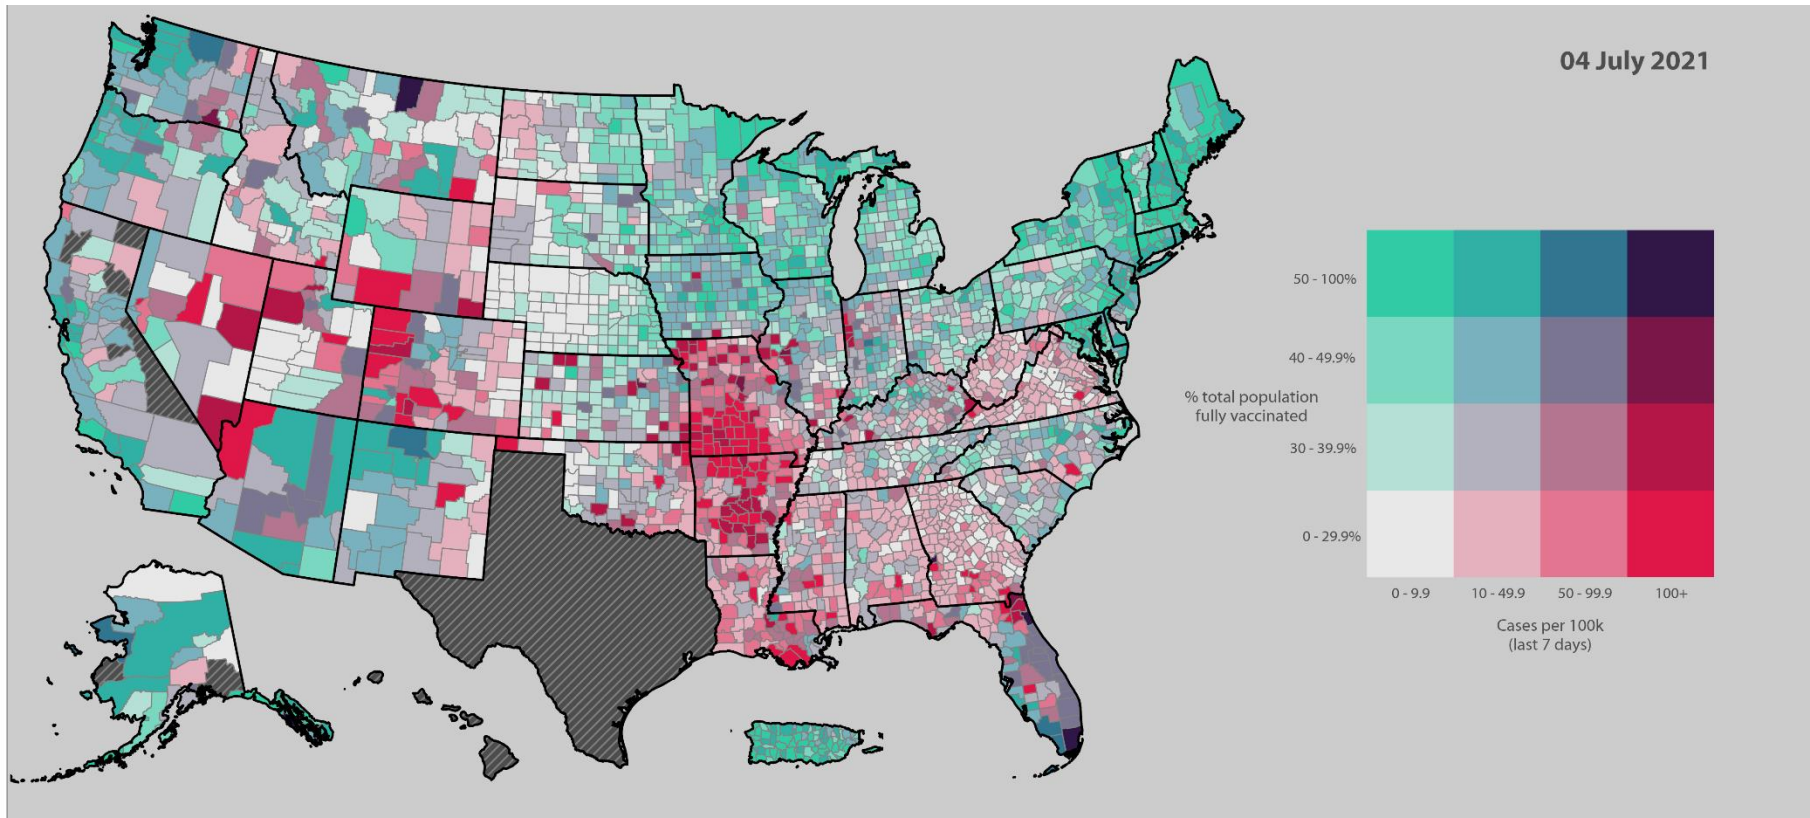

Vaccination coverage estimates are unavailable for Texas, Hawaii, counties in California with less than 20,000 population, and for certain parts of Alaska. These counties are shaded in gray diagonal stripes in the maps.

Vaccination county of residence data may be impacted by suppression and data completeness. Counties with small populations or in states with low reporting coverage of county of residence may be misclassified as “low coverage.”

Currently, 4 states are reporting below 75% completeness for county of residence in their vaccination data. These states are Georgia, Virginia, Vermont, and West Virginia.

COVID-19 Reported Cases per 100,000 Population (last 7 days) and % of Total Population Fully Vaccinated

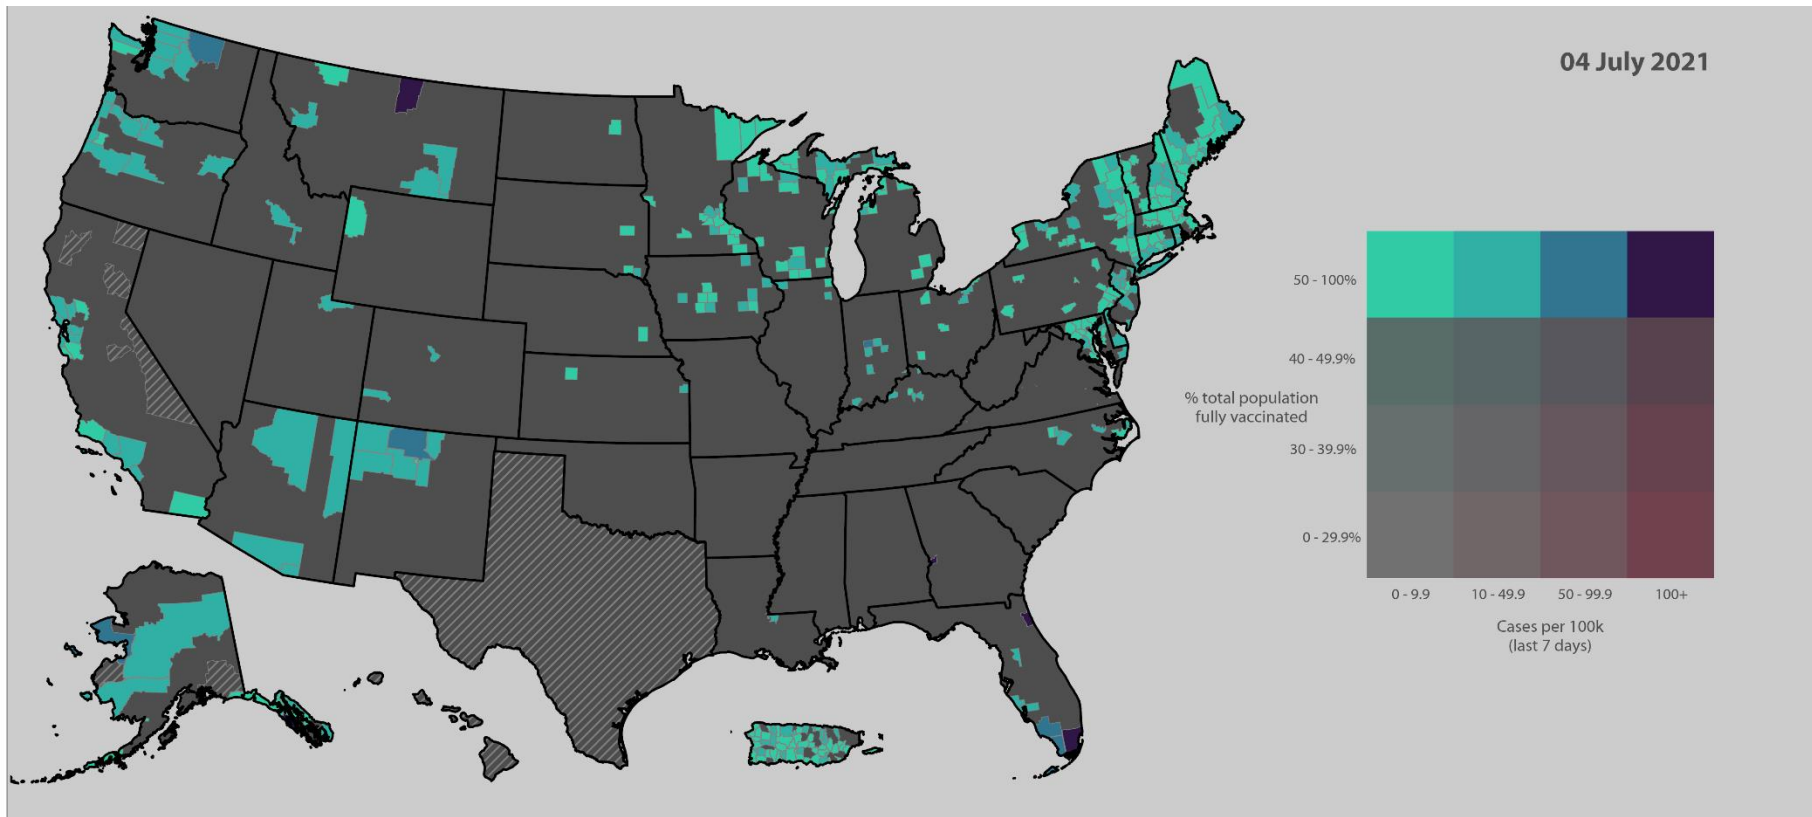

Source: Data reported to CDC by State/Territorial Jurisdictions/Select Federal Entities (Data for 4 July 2021 as of 7 July 2021)

Note: Counties with no data/missing data are indicated in gray diagonal stripes (n=274 counties).

COVID-19 Reported Cases per 100,000 Population (last 7 days) and % of Total Population Fully Vaccinated

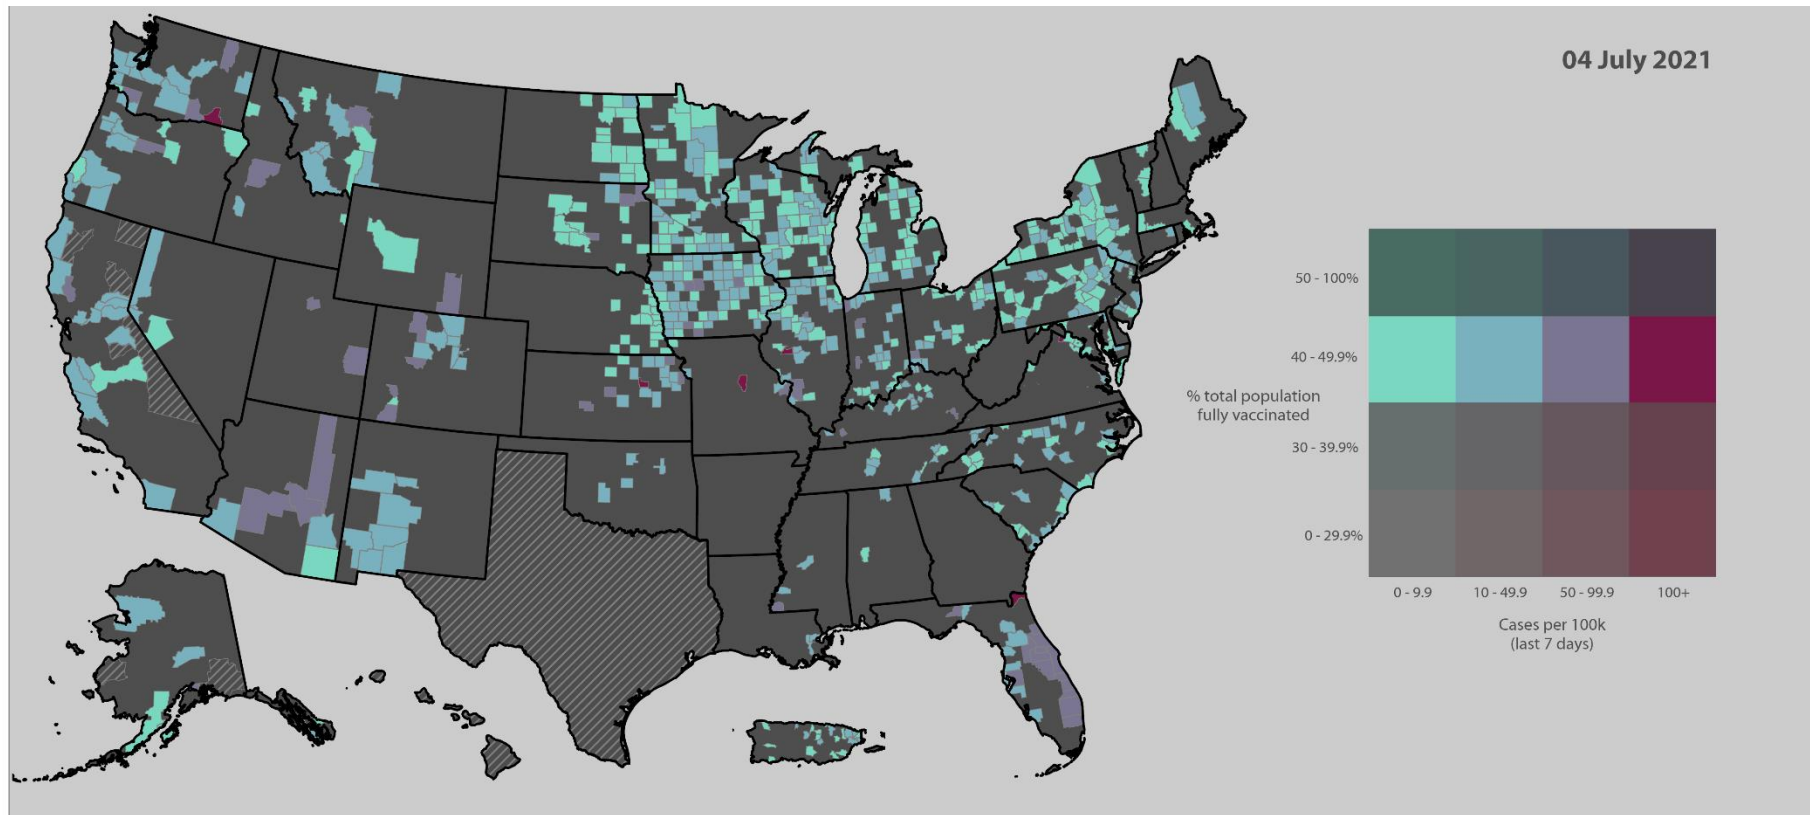

Source: Data reported to CDC by State/Territorial Jurisdictions/Select Federal Entities (Data for 4 July 2021 as of 7 July 2021)

Note: Counties with no data/missing data are indicated in gray diagonal stripes (n=274 counties).

COVID-19 Reported Cases per 100,000 Population (last 7 days) and % of Total Population Fully Vaccinated
